

Chilean Probability Seminar

Orador: Aleksandra Korzhenkova (EPFL, Suiza)

Título: Limiting distributions of Spherical and Spin $O(N)$ models: Appearance of GFF.

Resumen: Spherical model is a mathematical model of a ferromagnet introduced by Berlin and Kac in 1952 as a rough but analytically convenient modification of the Ising model. Since its inception it has enjoyed considerable popularity among the mathematicians and physicists as an exactly soluble model exhibiting a phase transition. In this talk we will explain its relation to the Gaussian free field in the infinite volume limit and to the spin $O(N)$ model in the infinite spin-dimensionality limit of the latter.

This talk is based on the joint work with Juhan Aru.
